Director's Address

ECE & Civil 27 November2025 11 am

CSE A, B &C 3 December

CSE D, E &F 4 December

CSM   A, B &C 3pm 3 December

CSD A&B and CSM D 11am 8 December 2025

After completing 10th and Intermediate, students join various engineering colleges—some join top institutions like IITs and NITs, while others join private or deemed universities such as VIT, SRM, CBIT, or Vignan. However, all engineering colleges follow the same syllabus approved by AICTE and UGC. The real difference lies not in the college name but in the student's effort, discipline, and vision.

Many successful people studied in ordinary colleges but reached great heights because of hard work. For example, students from remote government colleges later became professors at IIT Madras and NJIT. This proves that success depends on consistent effort, proper planning, and the right mindset.

Students must know their institution's vision and have their own personal goals. With modern facilities, online resources, and access to expert lectures, anyone can learn effectively. Engineering requires good time management because each semester has many theory subjects and labs. Good marks, strong coding skills, and communication skills are essential for getting jobs in companies like Infosys, TCS, Accenture, and Cognizant.

Spending just 30–45 minutes daily on communication practice can bring big improvements. Reading books like *Atomic Habits* and *The 7 Habits of Highly Effective People* helps in building discipline and clarity. With dedication and consistent learning, every student can compete globally, achieve success, and fulfill their dreams.
